Advanced Technology and Solutions

Formula for Healthy and Sustainable Homes

Profits and reputation grow with affordable, easy and effective solutions. Meet the demand for solutions for improved air and water quality.

HUMIDEX Ventilation for Moisture Control and Air Quality

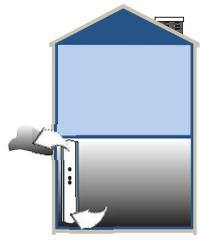

- Reduce moisture, mold, mites, asthmatic triggers
- Expel odors, gases, radon, toxic vapors
- Extract saturated moisture from walls, floors, beams
- Drier environment increases HVAC efficiency
- Creates an air exchange in entire house
- Maintain optimum conditions year round

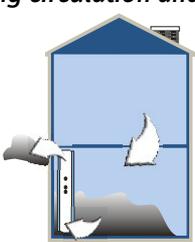

The Year Round SOLUTION... *A Healthy Dry Home is Easy as 1-2-3*

A professionally installed unit naturally transforms the problematic areas by maximizing circulation and automatically maintaining it.

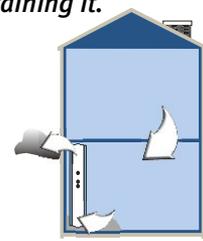

**1-
EXPEL**

the most stagnant damp polluted air from the lowest point where the problems are concentrated, along with the high level of combustion gases and radon. Pollutants that gravitate down and are absorbed by moisture will also be expelled. Unit focuses on the source of problems to cure conditions that work upwards into living areas.

**2-
REPLENISH**

with warmer, drier air from upper level to raise temperature and lower relative humidity. A fresher and healthier air supply from upper level dramatically improves air quality.

**3-
VENTILATE**

the entire area extracting absorbed moisture and condensation. Unit creates an air circulation in entire house to keep structure dry, preventing moisture stagnation and providing a healthy air supply.

- THE WHOLE HOUSE BENEFITS:**
- Year round moisture control
 - Optimal air quality
 - Healthy environment
 - Increased energy efficiency
 - Protection from structural damage

Basement Unit

No more damp, musty basement and crawl space!
Controlled Ventilation for a Dry, Healthy Home
Better than a dehumidifier - NO buckets, NO filters, only 38 watts!
